

Mojo Carrier's rolling floor is based upon a simple principal: a horizontal rolling tile for rolling items easily on a stage or where ever you like to roll. From complete stage-sets up to a car during a presentation. Even props or a DJ set could be rolled in in no time. Designed to setup easily and quick with the special jigsaw design. Tiles can be used straight or coupled in a corner of 90 degrees for even more fixation.

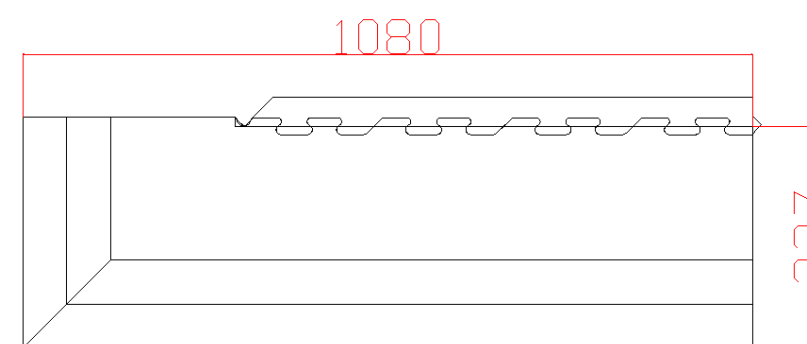

Each tile consists out of 20 high durable iron steel wheels for an even load on the tile and maximum mobility. Each tile has eight M10 inserts for mounting any object you like onto the tile. Hoists will come on an iron steel baseplate which can be easily mounted on each tile, or a combination of 2 or 4 tiles.

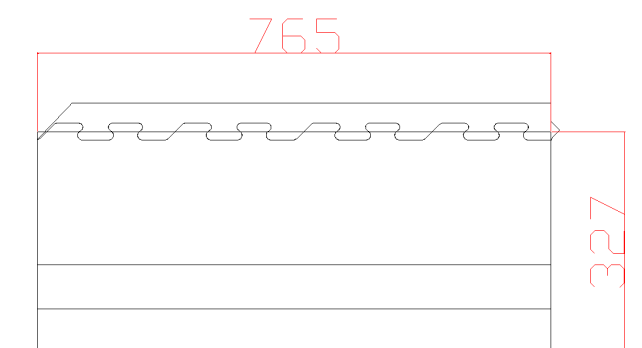

- Special designed jigsaw-sides
- High possible load per tile
- Easy assembly during load in and load out, no sharp edges and easy to lift
- High durable wheel for easy movement
- High durable HDPE tiles with M10 inserts to fix gear or items
- No bolts needed, just create your jigsaw in any shape you like
- Ramps available for easy roll on and roll off
- Maximum load: 850 kg per panel
- Height: 40 mm
- Size LxW: 1149x766 mm
- Weight: 23 kg
- UL94 HB flame resistance
- Heavy hoists, up to 4 tons pulling power per hoist
