

Mojo Carrier's rolling floor is based upon a simple principal: a horizontal rolling tile for rolling items easily on a stage or where ever you like to roll. From complete stage-sets up to a car during a presentation. Even props or a DJ set could be rolled in in no time. Designed to setup easily and quick with the special jigsaw design. Tiles can be used straight or coupled in a corner

of 90 degrees for even more fixation. Each tile consists out of 20 high durable stainless steel wheels for an even load on the tile and maximum mobility. Each tile has eight M10 inserts for mounting any object you like onto the tile. Hoists will come on a stainless steel baseplate which can be easily mounted on each tile, or a combination of 2 or 4 tiles.
